Fire Official Education and Training

Client: California Fuel Cell Partnership

2000–ongoing

Frontier Energy supports Toyota Motor Sales across the country by providing safety training for fire departments, fire inspectors, and code officials so they know how to respond to safety incidents with and apply codes and standards to facilities that use alternative fuels and energy. This specific project was focused on seven cities in New York, Connecticut, Massachusetts, and Vermont that are the locations of the hydrogen stations and repair facilities for Toyota Mirai deployments in the Northeastern states.

FRONTIER ENERGY:

- Customized training materials for the local jurisdiction
- Coordinated with fire departments and International Code Council chapters to be on their training calendars
- Planned and executed all logistics, including shipping vehicles to each location
- Conducted three training sessions per city (to reach all fire department shifts)
- Met with individual stakeholders to answer questions and provide additional information
