February 10, 2022 -- Frontier Energy, Inc., a national clean-energy consulting firm, announced today that it has opened its new Induction Technology Center in San Ramon, CA.

The Induction Technology Center (ITC) is a technical and educational resource dedicated to sharing accurate and unbiased energy and performance information about induction cooktops, woks, and hot food holding equipment. Based at the Food Service Technology Center (FSTC), the ITC was created to help demystify induction cooking and holding and assist in the promotion and adoption of this efficient technology.

Staffed by the FSTC's appliance experts, the ITC offers numerous ways to discover the benefits of induction cooking, including induction equipment demonstrations, education and training sessions, and an induction cooktop lending program.

Richard Young, Director of Outreach at the FSTC, explained: "The launch of the Induction Technology Center is the culmination of a decades-long endeavor to create a library of residential and commercial induction equipment that can be used for research, demonstration, and training purposes. There is a lot of confusion and misinformation surrounding induction equipment, so the purpose of the ITC is to be an unbiased, technical resource for end-users, designers, manufacturers, utilities, policy-makers, and anyone else interested in experiencing induction cooking technology."

Frontier Energy's Food Service Division has been in San Ramon for 35 years and operates the nationally renowned Food Service Technology Center (FSTC), also known by its nickname, "fishnick."

The Induction Technology Center is located at 12949 Alcosta Blvd, Suite 101, San Ramon, CA 94583. For more information visit fishnick.com/itc
