

Electricity

Program Portfolio Portal (P3)

Client: Multiple utilities

2015–ongoing

In the early 2000s, Frontier Energy launched the EnerTrek division to offer custom-built energy efficiency program tracking software to help utility clients by increasing accuracy and reducing time they spent reviewing and processing data. Leveraging all the lessons learned from dozens of uniquely tailored implementations, we launched a [Program Portfolio Portal \(P3\)](#).

Utilities in Texas, Louisiana, New Mexico, Illinois, and Minnesota are all successfully running P3, and the customer base continues to grow. Overall, P3 has tracked 624 programs and over \$200 million in paid incentives. Through P3, running programs is easy and utilities spend dramatically less time managing programs while increasing the accuracy of savings calculations.
