

Electricity

Utility Energy Efficiency Programs

Client: CMPAS (Central Municipal Power Agency Services)

2015–ongoing

Frontier Energy helps 9 utility members of the CMPAS network, a joint power agency, implement energy savings programs and achieve annual goals set by the state.

It takes time and energy to research emerging technologies, develop and deliver rebate programs, and comply with state reporting mandates. Working through their joint power agency, CMPAS utilities pool resources, aggregate results, and achieve success. CMPAS partners with Frontier Energy, which serves as a technical resource to members, and, with help from Frontier staff, files annual results with the State of Minnesota.

In addition to saving time for CMPAS and its member utilities, the relationship between Frontier and CMPAS dramatically improves the quality of interactions between participating utilities and their customers. Frontier staff are ready to respond whenever commercial customers inquire about rebates or need energy efficiency consultation.

With Frontier’s help, CMPAS utilities have helped their customers save over 46 million kWh over the past 5 years.
