WESTCARB

Client: WESTCARB

2003–2014

Frontier Energy was the lead contractor for the California Energy Commission’s West Coast Regional Carbon Sequestration Partnership (WESTCARB) project. With a budget of approximately \$60 million, the 90-member WESTCARB collaborative conducted studies and field projects to estimate the regional capacity for storing CO2 in geologic formations and in forest biomass. As part of this effort, Frontier co-managed a study of applying carbon capture and storage to natural gas power plants in California and led WESTCARB’s public outreach and education activities.

SPECIFIC SERVICES INCLUDE:

- Development and maintenance of the WESTCARB website at westcarb.org
- Organized and ran the project’s annual business meetings, including field tours to power plants and drill sites
- Drafted and edited comprehensive reports about progress, successes, and challenges
- Co-facilitated Energy Commission staff workshops about emerging CO2 capture and storage technologies
- Produced a series of professional videos about the field projects and WESTCARB technologies
- Co-authored a report about geologic carbon sequestration that was submitted to Legislature in 2008
